Introduction

What is it ?

The Pareto Principle, also known as the **80/20 Rule**.

The Pareto Diagram illustrates that **80% of effects** arise from **20% of the causes** or in other terms: 20% of our actions/activities will account for 80% of the results/outcomes.

Introduction

Purpose and Benefits

- The Pareto analysis to **support decision making**.
- It divides the source of a problem into two categories:
 1. **The vital few:** A small number of sources that account for most of the problem.
 2. **The useful many:** The large number of remaining sources that individually and collectively account for a relatively small part of the entire problem.

Total the data on effect of each contributor, and sum these to determine the grand total.

A team wanted to reduce the number of billing problems. We ask customer service reps to record the type of defects (or billing problems) for each customer call during a one-week study period.

Defect Type	# Queries
Address Wrong	8
Time Incorrect	20
Rate Factor Incorrect	4
Service Coding Wrong	32
Format Confusing	6
Payment Not Credited	3

Re-order the contributors from the largest to the smallest.

Determine the cumulative-percent of total.

Defect Type	# Queries	Cumulative %
Service Code Wrong	32	44%
Time Incorrect	20	71%
Address Wrong	8	82%
Format Confusing	6	90%
Rate Factor Incorrect	4	96%
Payment Not Credited	3	100%

Diagram Creation

Draw a graph to represent the cumulative percentage of total.

- The plotted points correspond to the cumulative-percent as measured on the right axis.
- Line up the points above the right-hand edge of the bars.
- Use MS Excel[®] to generate the completed graph.
- Look for a breakpoint on the cumulative-percent graph.

Vital Few & Useful Many

Title the chart, label the “vital few” and “useful many”, and show the cumulative-percent contribution of the vital few.

Vital Few	Useful Many
32	20
	8

Analyze

Analyze the diagram. Choose the most appropriated tool:

- Affinity Diagram.
- Cause and Effect Diagram (with 5Whys).
- Frequency Chart.
- SCP Analysis.
- Etc.

Takeaways

- Drawing a Pareto chart is very simple and is very useful when it comes to prioritizing problems.
- Unlike other principles, the Pareto Principle is merely an observation, not law. Although broadly applied, it does not apply to every scenario.
- Can be used to determine the areas in which we need to focus our efforts and resources to improve work efficiency.
